

Matrix Keeper

IR Access Control Time Attendance

Face-Tek® Matrix Keeper

The Matrix Keeper is the next generation of facial recognition time attendance and access control systems. It features a 720 MHz DSP by TI, a 3.5 inch TFT LCD, twin cameras (including IR matrix illumination) as well as networking capability - all in one compact case. It is built to meet tough industrial standards to withstand dust and water, and is suitable for both indoor and outdoor (with extra shield) environments.

The Matrix Keeper is equipped with our propriety facial recognition algorithm. The IR technology also circumvents the environmental lighting problem often associated with traditional face recognition.

Feature

- ID Capacity: 20 - 600
- FRR: < 1% and FAR: < 0.01%
- Recognition speed: With card < 0.5s / No card < 1s
- Liveness detection
- Built-in RFID reader
- Tamper-resistant
- Voice prompts
- Access and time & attendance data logs
- USB drive / SD card slot for data download
- I/O Interfaces (relay) for electric door strikes
- Set user access/attendance rules via FAAMS
- Works during daytime & night time
- Weight: 0.7 kg
- DOC.: FCC, CE, ROHS

Face recognition attendance & access management software (FAAMS) has been specifically developed to provide our Matrix Keeper users with additional user functions, including:

- Download record data from Matrix Keeper device(s)
- Transfer users to multiple Matrix Keeper devices
- Access control setting
- Assign work schedule
- Group access timeframes
- Generate access and attendance reports
- Languages: English, Chinese, Japanese

**How can my staff
remember the name of
all my valued customers?**

• No Problem

**HOW DO
I KNOW**

**when blacklisted person
appear in the controlled area?**

NotiFace II

Face Recognition Surveillance System

NotiFace II scans faces in crowds of people and analyses their face biometric features to identify a known individual.

With its intelligent face recognition algorithms, Notiface II analyses the input from numerous CCTV cameras, comparing the captured face images with database containing previously stored profiles and face templates.

The system announces instantaneously when a known individual appears, alerting operators to take proper actions.

NotiFace II instantly recognizes your VIPs whose faces previously enrolled in the system, assisting your staff to greet your important customer by their names.

Features

- Easy enrollment procedure
- Immediate identification and tracking
- Customizable voice and text alerts
- Compatible with analog video surveillance systems
- Logging of all face images with date and time index for quick search and access
- Support batch enrollment
- 4 modes of main interface display
- Extendable face similarity index
- Face Throughput Regulator to adjust capacity of face capture and recognition

* All specifications are subject to change without notice. Please check with your supplier for exact offers. Products may not be available in all markets.

As your VIPs walk into your premises, Clientface displays their face, name and profile instantly to help your staff to greet them.

As undesirable appears in the controlled area, an alarm will go off in Control Center. A security personnel can be immediately alerted to take proper action.
